

JEANNE TAMALELAGI :

8 "TUALA SPEAKS"

1.947-1.960 ; 203 PAGES

Seven sub-planes in turn there are seven further divisions. This process of mathematical grading goes on until the innumerable trillions of various spheres or oceans of existence are provided for the diversified types and groups of living creatures (human and otherwise) who pass through these higher mansions of service toward still higher ones.

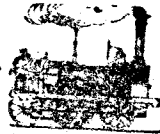

The Earth is a living planetary BEING, just as man is a living human being, and as with man, the Earth Being expresses itself through a triune channel, i.e. a personality, soul and spirit. The great seers and teachers among men of ancient days who inwardly contacted the currents of this great planetary personality, knew him to be the ONE who was bearing a great burden, or the responsibility of having wayward creatures, such as man, within his planetary body.

The Earth has been named MANU, but the EL was added to indicate the Godhood quality by the Jewish prophets who knew the inner records. Mankind was therefore named after the DEITY aspect, the spirit of the Earth. The "soul" of the Earth was recognized and honored as the Godhood aspect of the trinity, i.e. MANUEL, who supervises and directs the flight in space of the physical earth, its cooperation with and harmonious relations to the others of its solar family, this being but a fraction of Manuel's duties.

The "personality" of the Earth operates principally through all grades of atoms which constitute the materials, visible and invisible, of the physical, astral and psychic planes (or temples) of the planet.

The "soul" of the Earth functions mostly through all potent atoms of the intuitional, spiritual, and illumined spheres, while the "Spirit" of the Earth functions mainly through the intensely vital atoms of the GODHOOD plane, whose forces reach out to all sections of our solar system.

The outer edge of the Godhood band (about 220,000 miles out from the surface area of the Earth) is the last confining sphere of the earth through which man must discharge the last vestige of his Godhood service to the planet

for having existed therein. This man must do before he can be accepted into the next evolutionary mansion, which is the astral band of the sun; the astral band of the sun being equal in atomic potency to the highest Godhood level of the Earth. From this astral sphere man then works himself up in progressive service through the higher planes of the SOLAR DOMINION. The seven bands of the Earth are therefore comparable to the physical, astral, psychic, intuitional, illumined and Godhood temples of man—the only difference being in dimension.

The "trumpets" which the seven priests used in blasting the Wall of Jericho are likened to the harmonics of coordinated forces within man's emotional or sympathetic system. Man has within him the power of the entire universe expressing itself. All he must do is to tap the wavelength of his desires.

It is common knowledge today that the entire body is affected by emotional disturbances which pour into the blood excessive supplies of powerful hormones, thus exciting the brain centers and the entire sympathetic nervous system into a state of extreme strain. The transforming power within man's being has its switchboard in the balanced and harmonious FEELINGS or astral currents. The physical blood stream carries the prototype of man's astral field of expression. The positive and negative atoms of his astral body seek to bring about . . . through its messengers, the hormones . . . a duplication of their astral pattern upon the physical body.

This process is aided or retarded by the currents of energies which are known as "feelings" according to whether these feelings are harmonious or disruptive, thus vitalizing or depleting the energy of the genes and the blood cells as the case may be.

Man's feelings are expressions of energy many billions of times higher and finer in frequency rates than the currents of electricity used by man in lighting and other purposes of his home and business. Yet science shows that

If a single atom were isolated from the light-rays striking the earth from the planet Jupiter, and analyzed for its spiritual properties, in a manner similar to that used by the scientist to analyze the spectrum, to determine the physical properties of a planet, it would be discovered that this single atom contains the spiritual image and pattern of that entire planet. The same holds true of man. The blood stream of man's physical body carries the prototype of his being; thus, one drop of blood gives an analysis of not only man's physical condition, but the picture of his astral and psychic wave-lengths. The smallest electron of man's system is etched with the pattern of his being.

HOLOGRAMS

The more man studies the nature of the atom in all its innumerable component parts, the more he shall know of the nature of his being and of the cosmos. More power is available to man in harnessing the energy within the nucleus of a single atom than from all the furnaces that burn coal or oil to generate power. The atoms are the vehicles of universal consciousness and intelligence in an infinite of manifestations, for they are the endowment of Infinite LOVE.

May the readers of this lesson penetrate in consciousness within the realm of the worlds of the "Gods"—the Atoms—that are within their cells and take a glimpse of the radiations of the Absolute pervading the "Gods" as the water of the ocean pervades the sponge. As we become one with the Atoms, through them, we draw closer to the Infinite Light of the Omniscience of the Absolute. For the "gods" within seek always to fulfill the eternal promise to mankind: "And it shall come to pass, that before they call, I will answer; and while they are yet speaking, I will hear."

Man is, indeed, within the unknowable Infinitude of the Absolute, but the realization becomes increasingly powerful in proportion to the efforts we make day by day to know and work with complete cooperation with the creative "Gods" of not only our living temple, but of our feelings, thoughts, and consciousness.

Man's mind, functioning at a level of about four quintillion vibrations per second, can never at any time activate or put life into the Illumined plane wave-lengths. Man's mind or intellect must raise the oscillating factor of his brain cells to the ever higher frequencies that begin at approximately 32 thousand decillion vibrations per second of the Illumined Plane. When man's intellectual rhythm has increased and merged itself with these specified intense frequencies of this plane which we term the Illumined Plane, he will have no particle left in his personal cells of egotism, and no thoughts of self. He will then realize that he may avail himself of the eternal privilege of BEING motivated and activated by these higher wave-lengths of existence, and not the reverse as man understands here on the physical plane, which is that his thoughts are the enactor factors.

Therefore, until man learns to unfold the confining scope of his intellect into the intense oscillations of such higher frequencies of ETERNAL EXISTENCE, he will only entangle his consciousness all the more in the webs of erroneous HUMAN concepts.

Through the right polarization with the UNIVERSAL CURRENTS OF THE COSMOS man can be led by the power of that LIGHT through the "RED SEA" into Higher Mansions of the Cosmos.

The way lies in decentralizing man's consciousness away from the so-called self, and centering his awareness upon the welfare of the WHOLE (UNIVERSE). This is man's contribution—the sacrifice of the personal self—which has given energy to the planet he inhabits, and this in turn extends it into the solar system which then gives it to the galaxy, which then uses it for universal welfare. It does not end here, but this is beyond the scope of our lesson.

Acknowledging that "all is atom," we realize that within a single atom is all that INFINITY is. Since physical man is manifesting but one phase of the atom's evolution, the more wave-lengths he uses of the higher octaves of the universe in which he functions, the more useful he becomes to cosmic power. He consequently creates a greater field of operation for his own expression of life.

Man as a miniature universe is all that Infinity is! Like the drop of water which is not the ocean, but which in its essence (component parts) is all that ocean is, man is never outside of his portion of Infinity. He expresses only in different octaves of manifestation and awareness. Whether this expression be in the guise of so-called "good" or "bad," his infinity is still evolving a pattern of expression towards an ultimate completion.

2

being which are inherently endeavoring to work for the good of the whole being which is your physical universe.

The accruing and cumulative power of constructive thoughts may be fully exemplified in massed prayers. The electronic pressure of thoughts en masse focalized upon a constructive image propelled by intensity of feeling is truly a cataclysm, or over-whelming flood of energy, in the consciousness of those participating. Hence, when a student sincerely enters into a thought-wave for some achievement in complete abandonment to the image he has activated upon that wave-length, and particularly when uniting himself with the corresponding wave-length (covering the earth) through FEELING, he will be merged, as it were, into the image of his creation.

All the laws of the Cosmos can be found in the atom. In studying the world and its laws a man studies himself, and, in studying himself, he studies the universe. The governing law of the atom is also manifested in our own lives, when we take the time to investigate and understand it.

Scientists realize that there is a divine or mathematical pattern to everything in the Cosmos. Back of and within the atom there is an immutable law which keeps all its particles of manifesting intelligences in their respective orbits and governs the activity of this basic substance of all creation—the atom.

The SOUL factor is recognized as the inner man, the collective consciousness of all those faculties which form the thinking and willing nature, as well as the intuition.

The "Spirit" is the specific Universal Ocean (out of the infinitude of other kindred Oceans), covering all space of the cosmos, in which a particular soul and body are sustained as the sponge is sustained within the waters of the ocean. Spirit is the Universal God of the body and soul. "God is a spirit: and they that worship God must worship him in spirit and in truth." John 4:24

The Universal Spirit which controls the functional ability of the soul and body is therefore man's own omnipresent God. Body, Soul, and Spirit are the Trinity of man's being.

SPRIT

T/A

to mansions divine." Jesus in His day gave the same message. Man's consciousness is ever fighting a battle. "To be or not to be." We can choose the Path of Enlightenment or take the road to indifference. But each must choose, for stagnation cannot be tolerated in the march of evolution.

The path of evolution is not an easy one, but in the very difficulties we find triumph and victory. Each and every one who has accepted life on this planet MUST contribute to the evolution of not only his own future but that of the planet. Life demands a payment for the privilege of living, and that payment is SUFFERING, which is intensified energy. This energy is the fuel of evolvement; therefore, man must regard energy as his most precious possession, for he has to give an accounting of its use.

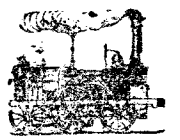

As long as we desire to treasure the weaknesses of wrong

so we must do the same each day. Everyone is governed by his own set of reactions to impressions, that is to life. You cannot transform life, but you can begin to transform the way you take life into your consciousness. If a person takes life as usual, in the ordinary way, that is, always receiving impressions in the same mechanical way and speaking from them in the same mechanical way and acting from them in the same mechanical way, then nothing can change in that person. Such people cannot evolve.

To effect a change of consciousness the first thing to do is to notice how and where you identify. Is it in justifying yourself? Always wanting to be right? Wrong talking? Gossip, scandal, criticizing, negative talk? All these lead to making accounts or debts to the earth, imprisoning atoms in malformations. When you have just criticized someone, go over what you said carefully and apply it to yourself. This neutralizes the poison in you. "Thou cannot go hence until thou hast paid the last farthing." We have to pay off the debts we make by imprisoning the atom messengers in our consciousness by the negative thoughts, words and deeds.

In summation of the trinity called Body, Soul, and Spirit, we must view them as a division of the One separate and distinct atom-seed, from our Ocean of Infinity. As stated in previous paragraphs, this Ocean is the Father, Omnipotent, Omnipresent, Omnipotent.

Each soul has evolved from his own Father-Spirit, and all Fathers are ONE in cooperative purpose with each other. This purpose, as far as Man is concerned is to evolve further up the ladder of enlightenment to become gods and goddesses, which means to become co-creator with the Father.

3

heresy. Thus, the words of Gautama the Buddha. The self is the greatest blasphemy, and separateness the greatest heresy.

Each time we make an effort toward higher understanding we acquire a little more spiritual muscle or strength. If we let LIFE be our teacher we will begin to see that life is a series of events and that we must make an effort not to IDENTIFY with them, for when we identify with anything, problems or events, we give it power over us.

We have to seal ourselves off from identifying by being consciously AWARE of our higher self. Begin with your thoughts. Notice your thoughts and do not identify with them. Thoughts lead to thinking which leads us into the path of action via emotions. Sometimes a thought impels an action, without thinking, and this is mechanical sleep-walking. It is stated by one of the great Teachers: "Thoughts pass, but thinking remains." We can let them pass before the screen of our awareness like a motion picture, but if we hold to that thought we become immersed in it.

one" ocean of red infinite substance to illustrate for us in some manner the Universal Spirit from which the soul of, for example, "Mr. A" evolved. It must be realized, however, that the octaves of Universal Spirit are as far beyond the octaves of sun-light as the latter are beyond so-called total darkness.

Previous to being evolved as a personality through the vehicle of a physical *body*, the atom-seed of "Mr. A's" *soul* manifested as a link in the chain of universal particles or atom-seeds of intelligence within the ocean of its parent *Spirit* ("degree one" wave-length of existence).

This atom-seed contains the entire *pattern* of the "soul" that is to be born as the "Mr. A" personality. The cells that are to form "Mr. A's" entire *body* are but the magnification or enlargement of the original atom-pattern within the Universal Ocean of the parent Spirit, which is of a positive-negative duality.

The atom-seed of "Mr. A's" *soul*-pattern floated in space from eternity within its Parent *Spirit*—with millions of other atom-seeds of the same wave-length—until that Parent Spirit directed the atom-seed of "Mr. A's" *soul*-pattern to be breathed in by a human father on earth.

Within the center of all atoms we perceive radiations which are infinite. The center of an atom is a realm of radiations in constant touch with all similar radiations of the cosmos, forming the foundation of the ocean of Infinity.

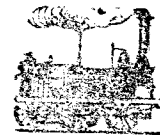

When we view the furthest outer orbit of the atom, we then begin to perceive in a measure the meaning of finiteness, wherein we observe a demarcation line designated as "space" between an aggregate collection of atoms and other aggregations. When a consciousness that is Illumined travels through the infinitude of orbital or spherical wave-lengths and penetrates to the realms of the center of an atom, its owner finds therein the reflection of his Star self. Therein he finds Infinity, where time and space no longer function. The finer the nature of atomic essence which constitutes our fields of expression in consciousness, the more we therefore gravitate towards those Realms of Infinity which are beyond the motivating principles of time and space.

It will therefore not serve "Mr. A" to be arrogant in attitude towards this Infinite Spirit, in whom his "soul" lives, and moves, and has his being.

This Infinite Spirit is "Mr. A's" Father-in-Heaven, whom he must *revere with the greatest profundity*, and love with all his soul and body. This Infinite Spirit will not be mocked by any deceptions from "Mr. A's" soul or being. It is the Lord of Karma of his being, and directs the leverage of each lesson in keeping with "Mr. A's" every move and thought.

It therefore behooves "Mr. A" to walk with his God in *righteousness* at all times. Whatever soul suffering or mental anxiety besets "Mr. A" it will be due to the attractions of his personality resisting the eternal directions of the currents of his Infinite Spirit or God. This Spirit of "Mr. A's" being KNOWS at all times and under all circumstances what is needed by him in evolutionary experiences—even when "Mr. A" feels otherwise and endeavors to evade his responsibilities.

Sooner or later his father God will compel him again and again to discharge such responsibilities, or adjust them one way or another according to his personal requirement for unfoldment to higher levels of consciousness.

"ZERO" represents the degree of the intellectual wave-length, and "one hundred" depicts the degree of intuition, where instantaneous understanding or illumination is acquired without reasoning and without thinking. Therefore, man must endeavor to bring the pitch or rhythm of his consciousness to the so-called "boiling" point of pin-point focus upon the intuitional wave-lengths in order to experience the radiations of higher intensity.

The single purpose of the soul is to evolve; therefore, stagnation cannot be tolerated for very long in any degree. The restlessness experienced in our lives is but the prodding fork of evolution, and it is this factor that causes so much dissension and division among families and nations.

The intellect of man may find satisfaction in the things of yesterday, but the soul (consciousness) becomes restless to seek new avenues of expression. When the intellect perceives something unfamiliar and new to its understanding, it will then endeavor to eliminate that unknown quality, and conflict thus begins. The soul endeavors to eliminate that which is no longer of service to its welfare and evolution, and the intellect, on the other hand, strives to cling to its old rhythm.

3×10^{10} Man's physical body is composed of over thirty billion cells—each type of cell being a living intelligence, connecting him with a corresponding "universe" in the cosmos, of which that cell is a miniature reproduction. Each individual cell has within itself in turn countless billions of different particles contributing their shades of wave-lengths to the aggregate rhythm of the cell life and expression. This fact should remind man of his integral connection with the Cosmos.

All the laws of the universe can be found in the atom, and the so-called secret of the universe lies within the directing energies of the atom.

Let us review the seven SUB-divisions of the physical atom: the physical, astral, psychic, intuitional, spiritual, illumined and Godhead. The wave-lengths of the physical SUB-division of the physical atom have their corresponding octaves in the physical SUB-division of the astral atom, likewise in the physical SUB-division of the psychic atom, the spiritual, and so on through the other planes. However, the inharmony generated by man's thoughts and feelings on the physical plane cannot penetrate beyond the astral and psychic SUB-divisions of the physical, astral, and psychic ATOMS. Thus, the higher wave-lengths within man are untouched by the inharmonious reactions of the lower and coarser vortices of his thoughts and feelings.

man's intellect to picture the reality of the formless Realm of Infinity, we must therefore use some avenue of approach towards the inner domain of the Absolute. We may take one of the avenues, for instance, that of the spirit of reverence—profound, heartfelt reverence toward that Inner Realm within the atoms of our being wherein emanate the eternal currents of LOVE for us. Through this inward flow of our current of reverence we begin to discover an expansion in our consciousness toward the CREATOR within the center of the atoms of our being. In response to this sincere reverence on our part we become bathed in greater and ever increasing rays of LOVE flowing outwardly to meet us, and we consequently begin to understand more and more of Infinity through each effort we make.

Faith

The word "faith" can be defined as follows: a loving and hearty reliance upon the immutable precision and operation of universal laws through which the perfect and unchangeable order, harmony, and equilibrium of the cosmos are governed.

Universal wave-lengths of atoms form the substance which constitutes the infinite ocean of atomic elements that formulate, bathe, and sustain the cosmos and all therein. In brief, these countless wave-lengths of atoms are the infinite substance from which the cosmos finds existence and expression, including man. Therefore, as man is composed of all the electronic elements and energies that constitute the essence of the universes, it must necessarily follow that the universal laws which govern the cosmos are also governing the activity and life of the cells of man's being.

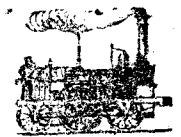

As man's consciousness is but the reflection and image in totality of the consciousness inherent in all the cells composing his physical body, and since his cells are entirely composed of atoms—the diffusing centers of universal consciousness and intelligence—therefore, man's feelings and thoughts are of electronic currents.

Why then does man have inharmony and disorder within the cells which cause pain and suffering? Like the prodigal son who had turned away from the care of his father's love and the protective shelter of his father's care—in the endeavor to create for himself a separate existence by wandering—so man has turned away from the guiding light of wisdom emanating from his Father's Love.

This Love is the all-encompassing, all-pervading, and all-sustaining energy of the cosmos, and without it there would be no atomic substance to formulate and direct the cosmos and all therein.

This origin of all energy of creation is the reservoir of forces from which the cells of man's intellectual center in the brain draw their currents to think and to reason.

LOVE
*

ATOMS

5

may be applied in raising the oscillations of the brain cells from the slow and dense vibrations of the intellectual awareness to the much faster vibrations of the intuitional wavelengths. The "fire" in this case will be the flame of FAITH. When man's awareness reaches still higher, above the wavelengths of the intuitional octaves, he is encompassed by terrific oscillations of the Spiritual Wave-lengths, beginning at octave one hundred thirteen at the rate of eight decillion vibrations per second. This is the plane of constant wisdom. 8×10^{33}

It must ever be remembered that ALL IS ATOM. Man is composed of a system of whirling creative atoms, functioning at one moment on a centrifugal flow (reaching outward) and at another moment on a centripetal (coming inward) flow of consciousness. When the aggregate consciousness of man is raised in vibrations of expansion beyond the intellectual degree to the "boiling" point of the intuitional frequencies, the latter infuse the inward flowing awareness with the spark of correct evaluations of life and bring into it the right solutions of the problems of mortal existence.

"Time" and "Space" are adjusting factors of the manifested Cosmos, and may be used by man as a bridge for him to span his "I" land of isolation (self) to the whole or mainland of completeness (ONENESS with the COSMOS).

Time is an aspect of the centrifugal force of the Cosmos. This manifestation and directing force of Love Infinite moves rapidly from within the center outwardly in all types of atoms in the Cosmos (including man who is a miniature universe). Space, on the other hand, is an aspect of the centripetal force of the Cosmos, moving swiftly from without into the center of all atoms. Man's outer or mundane consciousness may use the inward flow (bridge) of this power of infinitesimal particles to carry his awareness into the sanctum of WISDOM abiding in the center of the atoms of his being.

One of the important functions of the time factor is to disintegrate, by the impact of its incessant flow of energy,

From this fact one may realize the intense power dormant within the currents of the human consciousness, since its energy is composed of electronic particles. The use of this power and the harnessing of its might will be a science which man must sooner or later learn, and certainly not as he has been doing in the past fifty years of unscientific postulations.

Man's consciousness when uplifted harnesses wavelengths of higher oscillating particles, and at such moments the forces of faith may be easily contacted. Therein man realizes the bliss of faith—secure and undisturbed he knows all is well, and he perceives more than ever that the forces of faith are just as much at his service as are the forces of oxygen, which he may draw at will with each intake of breath.

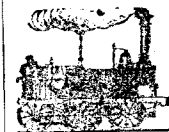

In attuning to the universal wave-lengths which man has designated as "faith," he raises the magnetism of his being to synchronize with the Universal Consciousness that supports the infinite currents of faith, and thus does he become aware of perfection. The shadows of fear and uncertainty are automatically dispelled, and man is made whole in the image and power of his God. Christ required of those whom He had assisted in healing to "go and sin no more," not to lower their consciousness again into the vortices of misapplied thoughts and feelings which eventually lead to afflictions of their minds and bodies.

If man would turn his consciousness and feeling inwardly **T.A.** to sense the dominion of his Star Factor (Father) he would find that he is definitely inter-related with his Son-of-God factor. No matter what happens in the outer world the inner realm rests in the Everlasting Arms or the Law of Duality and is secure in that strength of Infinite Loving Care!

The struggle of the human nature against the Divine Self is an effort or battle to attain the Pearl of great price (Perfection) and become a Son-of-God or co-creator with the Absolute.

At this point let us pause to remember that the Law of Karma (cause and effect) is the governing factor of the atom-messengers. They are laws that give to us what we desire as we express our privilege of being co-creator of life. If at times they cause suffering, it is due to their endeavor to lead us back to the path of perfection. The struggle is between our human desires and our divine aspirations.

FREE WILL

With this knowledge of the definition of "self" we realize the Buddha stated the concept of, "The self is the greatest blasphemy." This is due to man's endeavor to erroneously create within his mentality an idea of infinity for something that can *only* prevail in *finiteness*. The Eternal Ocean of Spirit is beyond all boundaries and definitions of "self." *

The Buddha in 500 B.C. stated: "He who struggles in the interest of "self," so that he himself may be great and powerful, or rich or famous, will have no reward, but he who struggles for righteousness and truth, will have great reward, for even his defeat will be a victory."

We will now turn to a brief explanation of the Universal Oceans of Spirit which we term "Father". Man has no other Father than his own individual essence which we will term "Star Factor" a more scientific term for this age. Jesus repeatedly referred to this principle as "the Father" for it was in keeping with the understanding of His time and Age. Such phrases as "The Father and I are One" and "In my Father's house (the universe) are many mansions . . ." are descriptive of the Universal Ocean from whence He came. T.A.

Jesus tried to teach the people of His day the hidden truth that they were intrinsically connected to Gods or their Fathers, just as Buddha revealed the keys to His disciples that they were Buddhas in their own respective Universal Oceans of Spirit Essence.

But this understanding cannot be fully achieved by the personality on earth until such a person has completely eliminated the mental vortices of "self" concepts—i.e., the identification of his entire "cosmos" as being expressed by the limiting boundaries of the fields or aura of the physical body *on earth*.

We observe how many people have put boundaries around their "ME" or "self" concepts until it is their only world. Jesus referred to this in John 12:25, "He that *loveth* his life shall lose it; and he that *hateth* his life in *this world* shall keep it unto life eternal."

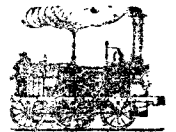

Those who love *mundane existence*, in all its ramifications, as constituting his concept of *life* will automatically

But he who severs (hateth) such mundane attractions for worldly things, and builds up instead thoughts of the higher values, "treasures in heaven," will find at so-called death of the body that the preservation of his idealistic thoughts on earth have become treasures of continuity "unto life eternal" in the higher worlds.

Every person born on earth has his own respective Ocean of Spirit. The aggregate or *totality* of all these infinitudes of Oceans of Spirit or Father-Gods comprises that which is termed THE ABSOLUTE. We may illustrate this factor with a mundane simile that the Infinite Fathers are the Universal Oceans of Spirit which comprise the *interblending* omnipresent oceans of red, orange, yellow, green, blue, indigo, and violet radiations covering the entire cosmos.

The unification of all these Oceans is then termed "The Absolute." These Oceans of Spirit, and subsequently, The Absolute, are the Infinite Pure Spirit pervading all and sustaining all. The word "Father" as we use it in the sacred scriptures refers to the Infinite Oceans of Spirit which are Universal, i.e., relating to the entire cosmos, being omnipresent at the same time. Although each soul or person has evolved from his own respective Father-Spirit, nevertheless, all Fathers are ONE in Their cooperative purpose with each other.

Each and every soul must therefore evolve along the same school of evolution, wherein the principles of purity of heart, and meekness of spirit, as well as service to the welfare of the whole, are required. Certain souls have evolved far in advance of others, and have by the authority of THEIR vast KNOWLEDGE, become qualified TEACHERS or AVATARS to help others on the path of evolution. There can be no standing still or stagnation in any part of the cosmos. All Creation is continually in a state of "becoming"—and the evolving cosmos demands an equal tribute from man.

An atom is not matter in the sense that it is an inert material as conceived by many philosophical teachers of modern times. It is an infinitesimal particle of Spirit.

If we were to select a fine human hair which is just within the range of our vision, we would have to place six hundred and twenty-five thousand (625,000) atoms, side by side on a line to measure the thin width of this human hair!

Then, if we were to take just one atom—out of the 625,000—and cause it to split into two portions, the mere coming apart of those two portions would set up such terrific flow of energy that it is equivalent to 200,000,000 electron volts.

One electron volt alone is equal to 10,000 degrees centigrade in active disintegrating force; so much so, that the body of a man placed within the field of this terrific moving force would be turned into vapor instantly.

Multiply 200,000,000 electron volts by 10,000 and you get 2,000,000,000,000 degrees centigrade! This represents the terrific movement or flow of spirit power from one atom's mere division into two parts.

But, when we consider the unused power still left unreleased in the two portions—when the atom was divided—the above figure of two trillion must be multiplied by many more trillions!

This staggering power from ONE ATOM alone, surely, should cause man to alter his old, childish concepts of the atom being inert matter! If an atom, the vehicle of God's Spirit, represents colossal power, it must also contain all the other qualities of Infinity which man has yet to understand.

"God is a Spirit." John, 4:24. Common sense tells us that God is not only Infinite Spirit in Whose all-pervading Ocean all of the cosmos "lives, and moves, and has its being," but, we realize that He must have means of expressing the overwhelming Might of His Infinite Power.

This means of expression is ATOMS—the distributive

Through you, the Father manifests His Love. Therefore, whatsoever you think and feel, let the Father's currents of Love motivate your actions, for then you permit your deeds to be infused with the maximum of His Love. In this way you become His conscious son or daughter in willing service upon earth.

Man of himself can do nothing without his Father. Consequently (man cannot even love without the spirit of the Father inspiring him.) When the consciousness is accelerated through this realization that only God loves, then LOVE is the motivator of man's deeds and he can assume no unfavorable "karma" or effects, since Love begets Love.

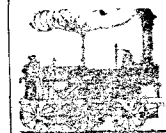

This is the Truth that shall set man free . . . that God, our Father of eternity, Loves, and the Energy of this Love creates, governs, and sustains all Creation and man as an infinitesimal speck of dust therein.

Whenever man sets into action the cause of his mental creations without the conscious realization that he is using the Forces of His Father, he has to assume the effects thereof. The Law of Attraction decrees: "That which is born of the flesh is flesh, and that which is born of the Spirit is Spirit." John 3:6.

The Infinite Father originates the flow of the currents of His love through all creation and consequently man partakes and uses these currents, in the same manner in which he uses the atoms of oxygen of the atmosphere.

We may rightfully say that the Father does the loving through man, since HE is the origin of Love and provides man with its forces and the ability to use them. It is only when man is humble of spirit, and meek of heart towards the Infinitude of His Father that he can contact in a conscious degree the supreme power of the Cosmos which is LOVE.

In rare moments when man actually feels the infinite currents of Love flowing through and suffusing his being, he is aware of divinity in the object loved. All is then perceived as being surrounded by the glow of perfection, and the world which he is familiar with reveals to his inner vision its radiant soul.

effects. To focalize the attention to a single point of attraction and steadfastness within the heart, or Love center, attunes man to the magnitude of Infinity where all is Love.

When man's being finds itself—in consciousness—within this Domain of Infinity, nothing can be added or taken away, for Love is the sum total of life itself. *

Meditate on the following: "Converge your consciousness to a pinpoint (of steadfastness) within the heart if you would know Infinity!"

The state of consciousness which we need to ford successfully the rough stream of earthly thoughts is the awareness that Love is a Tangible and Infinite Reality.

The highest human conception of Love is but a faint spark of the universality of God's Love for ALL. To understand Love, man must reach beyond the confines of his thoughts and place his awareness within the cells of his being and feel the cohesive might and pull of his Father's Love drawing him into Oneness with His Infinitude. Beyond measure; beyond depth; beyond height; beyond length; beyond breadth, and without effort—for LOVE IS! It is the Origin and Foundation of All life.

20 TUALA SPEAKS

all species of life may find their respective medium of expression. Thus, man must be constantly aware of the fact that Infinity being Infinite, even the smallest atom, or electron, contains the intrinsic essence of ALL that Infinity is. *

The percentage of the various molecular elements composing man may vary in different planets and solar systems, but only due to the fact that these diversified percentages are conducive to the specific life evolving upon that particular planet, star, or solar system.

Man is composed of the elements which constitute the cosmos, and is therefore inter-related by electronic substance to the universe and solar system in which he functions. The elements which constitute form upon the earth, also compose the same on other planets, although in different proportions or percentages in groupings of atoms.

i → LOVE can have no opposite, since it is ABSOLUTE, and GOD is Love Infinite. In what manner then can we know we have consciously contacted LOVE? When we are absolutely and completely pure in heart, with not a particle of human tendency to flash its shadow across the mirror of our consciousness.

When we are completely freed of all traces of that human sense of importance, when the mind receives only the awareness of God's Presence, and not of self, then the forceful currents of profound reverence take over the projecting machine of our awareness and throw upon the screen of our consciousness our complete absorption in GOD ALONE, then we shall know that supreme moment: Love has revealed Itself to us!

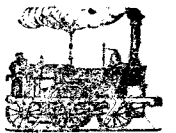

The divine alchemy of Love gives Life Everlasting. (Divinity is Love expressing ITSELF.) This omnipresent Divine Radiation is flushing and sustaining our beings every second of life. Its radiating particles form the invisible atomic color ingrained in the currents of our feelings and translate their tints through the phenomenon called "thought."

Just as smoke is the phenomenon of the element of fire, so "thought" is the "smoke" of the currents of feeling." And divine feeling or intuition is the smoke of Reality or Truth—the attribute of Love Infinite.

Love—the motivating energy of Divine Consciousness—must be felt by the heart, and not viewed pictorially by the intellect, if man is ever to know of Divine Consciousness. The intrinsic Essence of Love Infinite cannot be described by mortal consciousness. It must reveal Itself, when man is reverentially receptive to It.

Each word or thought is an electronic impulse or flow of energy emanating from the electro-magnetic fields of man's consciousness. This energy impulse radiates forth into the atmosphere seeking its positive polarizing currents of life frequencies or rhythms. Even our idle words will judge us, since the word uttered is a living wave of energy force leaving its imprints wherever it travels, and finally returns to rest its indelible eddies within the sender's being.

The weight of his immutable law of responsibility should make man pause before he speaks, since the cumulative effects of his life's utterances would judge his merits or

To Express through one's feelings, thoughts, and activities the flow of the Father's Love-Currents is to live Divinely, and the more man is aware of Divinity the more does he express his Father's Love power.

The Light which emanates from the rhythm of Love Infinite is the SUN that lighteth every man out of darkness. He who expresses the Infinite Currents of his Father's Love, as fully and completely as it is within his evolutionary capacity to do, is enlightened and illuminated.

As man's awareness ascends in conscious attunement into higher wave-lengths (planes) of comprehension, he leaves behind the distractions of misapplied attachments of mind and feelings for things that do not endure in the cosmos.

With this ascension, or expansion, of consciousness he directs his understanding within the inner Heart-beats of the Cosmos which are suffusing every cell of his being, and there discovers the true realization of the Feelings or Pulsations of Infinite Love.

The higher man ascends in degrees of awareness and thus contacts the universal currents of maximum activities of Love, the closer does he approach the heights of Perfection. Only in this awareness will man be relieved of the bewildering vortices (whirlpools) of lesser states of consciousness.

The Laws of the Cosmos are naturally immutable and invulnerable. They are subject to but one edictal fiat . . . the governing Love Power of the Infinite Father. Hence, where Love Infinite is contacted, there Light, or Universal Wisdom abides.

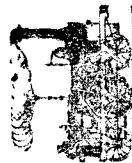

When we state that God is Love, we must realize with all the awareness of our being that the infinite currents of Love—which sustain and maintain the Cosmos—cannot be increased or decreased, since they are infinite and eternal. Man does not create or manufacture Love, neither does he—of himself—love.

age when man is forced to keep pace with the evolving electronic wave-lengths of the Cosmos.

The teachings of Light of Ages (Maitri) will compel the student to view every defect and virtue within his being so that the Light of Loving-Kindness may find entrance into his consciousness. The Law of Loving-Kindness operates on the universal wave-lengths of Love Infinite, which is concerned with the welfare of the WHOLE rather than with the welfare of an individual. Aquarius is the sign (ocean) of the Universalist. When the student obeys the Law of Loving-Kindness he will be in harmony with the entire wave-lengths of the Cosmos and will not experience penalties of inharmony that come from transgression of this Universal Law. When man violates a mundane law he has to pay a penalty and so it is with the Laws of the Cosmos, only in a much heavier and greater degree. The person who foolishly demands that the laws of the Cosmos should be set aside for his own personal comfort and convenience finds instead that he is FORCED to recognize through the vortices of suffering, that he will eventually have to conform with the universal laws of harmony or continue in tribulation.

The Science of Loving-Kindness does not pamper and cater to the personal wishes and desires of individuals. The Law of Loving-Kindness demands the consideration and welfare of All, and is neither partial nor inclined toward favoring one above another. Can we say the Father Infinite loves one person more than another or is more in a stone than in a tree? No, Loving-Kindness is not the special privilege of any one creed, race or being. It is the Universal equalizer of all LIFE!

The spiritual cells of man are quickened and raised into a higher vibratory oscillation only when he lives the life of Loving-Kindness, i.e., being loving and kind to the atom messengers that form thoughts, words and deeds. The teachings of Light of Ages have been established in a conscious manner upon the earth at this cycle of evolution in order to lead man upward to the knowledge of his divine

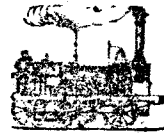

These currents in turn are interrelated to the universal currents of the cosmos of like frequencies. This being so, a man's so-called "faith" is in reality the flow of electronic energy emanating from the cells of autonomous nervous system and radiating into the surrounding wave-lengths of the "universes" which are similar in degree of vibratory rate per second. This pressure of currents from man's being in turn causes a return flow of waves of corresponding energy from the "universes" back to his electronic system. Each electron combining, in asserting such a flow, is possessed of that universal aspect in intelligence which instantaneously seeks to fulfill the purpose of its flow and creative activity.

An electron which carries the radio-active energy of the faith-frequency, naturally will set into greater activity all particles in each and every one of the faith cell-centers in man's system. This increase of electronic radiations in such centers of man will automatically attune his being to those controlling wave-lengths of the cosmos which maintain the evolution and maintenance of the universes.

Hence, faith is based on a definite principle of the cosmos; it is the setting into motion, within the cells of man's autonomous system, the flow of strengthening and sustaining electronic currents, which harmonize the forces of his being with the controlling universal intelligences governing the welfare and solidarity of the universes. These universal intelligences are mathematical and precise in their functioning, synonymous with universal order, harmony, and equilibrium.

* The working of man's cells is governed by these triune constants of the universe, i.e., order, harmony, and equilibrium. Therefore, the particular cell-centers of the brain which give expression to the humanized phenomenon of life designated as "intellect" must be trained so as to learn to be guided under all circumstances by those higher intuitive centers of the human body—forming part of his sympathetic nervous system—which are interrelated to the governing intelligences of the infinitude of "universes" and solar systems.

These higher centers in man's body are for the purpose of giving the intellect in man the power and light of understanding so as to keep his being in rhythm with the forward flow of the directing energies of the cosmos. It is only when the currents of man's reasoning cells are allowed to become disrupted in their retention of the harmonious flow of the triune governing constants (order, harmony, equilibrium) of his being that he becomes confused and fearful in consciousness.

Fear and Confusion are the natural reactions of the intelligences in man's reasoning cells losing their radio-active connection with their higher centers (intuitive cells); these higher centers connect man's system of energy with those of the cosmos. When the lesser centers (reasoning brain-cells) are deprived of their normal supply of energy from the universal reservoir of power, they automatically feel a disturbing sense of apprehension and uncertainty. Like a child lost in the woods (fear) he feels acutely the sense of being "cut off" from the security, guidance, and protection of his parents and home.

Thus that which man designates as "faith" is in reality a tangible, inherently conscious electronic substance, a verity of truth, whose firm foundation is supreme perfection.

Thus the Law of Faith is the grace of purification, wherein man testifies to his attraction to his creator, which determines the tangible expression of his faith. In the manifestation of such a faith man redeems himself through the purifying forces of his Creator's love reciprocating and polarizing the currents of his affection toward his God.

To exercise faith is to bring its universal currents or wave-lengths into their active and maximum manifestation in one's life. Faith's universal currents are contacted through the sympathetic nerves of the heart, wherein one's feelings contact the omnipresent wave-lengths of intuition and receive in return instantaneous knowledge of the mathematical operation of the currents of faith.

St. Clement, one of the prominent Christian Fathers of the second century, stated that knowledge is scientific
