

February 5, 1998

Greetings from Florida:

I was pleasantly surprised to receive a letter from Alex's mother. My wife and I were just discussing Alex within the last 48 hours, wondering what had happened to him. We are so sorry that he could not get a job in the aerospace industry. The apace industry moves only on political motivation. Without a strong USSR, we have nobody to race against. At the present time, all the aerospace companies are laying off employees and cutting down on their engineers. This is such a shame, since we should set our own goals and work toward the exploration of space, whether we do so alone or with others.

One of the reasons that the US has not engaged in a space race is that NASA is only a "front" for the real space race that is going on behind closed doors (with Russia, and especially with China.) In 1947, at least two flying saucers crashed in New Mexico, and since that date, the US and the rest of the world, (except Brazil, Iran, and Belgium) continue to deny the existence of alien life. However, so many millions of persons have seen UFO's that no one believes the governments any more. There has been a subtle plan of some of the major governments to gradually tell us about aliens, and for the last 15-20 years been behind the Hollywood movies showing "good" aliens. This is an attempt to condition the citizens of the world to accept the idea that we are not alone. The Catholic church has been the largest opponent to letting any such information out regarding aliens, as it would diminish their power..

This is how I understand the present situation:

In our galaxy alone, there are between 5 and 7.2 Billion inhabited planets, with intelligent life, most of which is human. Human life developed on about 40 million of those planets and spread to the others. Since there are about 400 Billion stars in this galaxy, and each with about 10 planets, this is really a small percentage of inhabited planets, but still a huge number in total. About 110 different groups visit here on a more or less regular basis. This has been going on for at least 20 million years. Extensive trade was going on with Earth people as far back as 2000 B.C. The pyramids in Egypt are about 70,000 years old, and were build by one of many groups who have sent colonies here over the last 300,000 years. There are about 8 alien groups who have active, permanent bases on the Earth and/or the Moon. They are here to study us. We are a sorry lot of humanity, and they seem to be placing bets as to whether or not we will make it as a society. They have contacted various governments in an attempt to get us to unite, get some civilization and stop fighting. However, the politicians seem to prefer to be a big fish in a small lake than a small fish in

a huge universe. The time is short when several governments are going to reveal the alien presence. However, you can bet that the truth will be told in such a way that we will be made to believe that the governments have “discovered” the aliens. The governments will probably not report that they have been lying to us for 50 years. The problem is that not all aliens are good. There are some aliens who view us in the way that Columbus viewed the Indians he found in America. We are only objects to be enslaved or used for their own use. However, we are lucky in that the group of aliens that are the main source of the white race (and Arabs) in ancient times are back here helping various governments to set up defenses against any future alien trouble (such as the “star wars” type weapons.) We here in the US (and China, England, Russia at least) have very advanced flying saucers in secret development and most of the ones seen are really of Earth construction. This is the most closely guarded of secrets. In a few more years, the planet Earth will be able to defend herself as long as any invader is not too far advanced over us. This is one reason Alex has a had time getting a job. The real engineering is being done by companies he has probably never hear of, such as one company known as EG&G. I have been told that our technology already has developed a UFO that can break light speed, others that can pass into the past or future, etc. We are close to developing a teleportation system where material can be transmitted instantly to any spot on earth at the speed of light. The military need to keep this secret is obvious. We still have enemies on the Earth, and the US learned at the end of World War II that to use any super weapon in an open fashion, leads to everyone else getting one. That is why we have kept secret the super weapons we now have. The Hydrogen bomb has been obsolete for over 25 years. All this I have learned, without any secret clearance. I can only guess what the people know who have top secret or higher clearance.

In time, the Earth will join our cosmic brothers from other planets. In the meantime, no one can be sure who is or is not an alien. Each group comes here for their own reason, and there is very little, if any, contact between the different groups. They have their own security problems, and usually travel cloaked in space to avoid detection. It is possible that an alien can be here without other aliens knowing it at all. However if an alien is here, she is not likely to tell anyone. That would

seem to defeat the purpose of keeping a secret.

WICKY

Now, as to the planet AKRON. I know of no such planet. However, as there are over 7 billion inhabited planets in our galaxy, the fact that I have not heard of it does not mean anything. There is a planet called ACART (or in German AKART) that is only about 5 light years from here that has about 23 billion humans living on it. They are only about 117 years more advanced than us and while they do travel here, they have not developed very good space travel, and the time to get here would seem to be prohibitive. They have come here several times in the past to get seeds, plants, etc. to try to grow on their planet to try to feed their huge population. (They do not believe in birth control and their future is dismal unless they change their thinking.)

If your friend claims to be an alien, have her prove it by some method. If she pulls out some ray gun or light saber (as in the movie "Star Wars"), I would take her seriously. But, you can never be sure that someone is not an alien. The alien groups that are really advanced have a problem with one or more people who occasionally steal a space ship and fly it away to another planet. They also have the problems of criminals who steal ships, etc. What ever we have experienced, they have the same problems, or have had these problems in the past.
