S.T.

THE UFO AND THE NATURE OF THE UNIVERSE.

by

AD ALFA.

The term "Unidentified Flying Object" is well suited to describe the strange phenomena now seen almost daily in our skies somewhere in the world, but when these objects descend to land upon the earth they are become "identified", sometimes as the most fantastic, or even ludicrous, flying machines ever conceived. Their occupants also may appear decidedly queer to say the least. Sometimes as really beautiful, well-proportioned human beings, but sometimes as dwarfs, or semi-humans, or even as robots. The beautiful bell-like scout ship from Venus or Mars, or the pearl-like, iridescent disc swinging through the skies, seem to belong to space and the mastery of the gravitational and other cosmic forces, but these "airships" or "air-locomotives", dragging anchors and picking up cows - these have the UFO-ologist really puzzled. Then we have the "unfriendly" or "hostile" UFO and IFO which scare the pants off people! There must be a lesson in this somewhere.

The lesson we have to learn must concern the real nature of the Universe and of MAN himself. These ludicrous flying machines presumeably traverse space just as successfully as their better looking counterparts, and their appearance or structure seems to be remarkably adapted to the time or phase of human development - just one leap ahead, as it were, to the period in which they appear. This peculiar fact must have something to do with the content and state of human minds at the time. To-day, for instance, with our thoughts reaching out into space, or immediately prior to this condition of mind, the UFO and IFO assume the disc-like form so well suited, one would think, to the traversing of space. Is it so coincidental that Kenneth Arnold should touch off the flying saucer era immediately prior to the first sputniks? Is someone egging us on? One has the impression that these fantastic or ludicrous types of IFO are not intended so much to puzzle or confound the UFO-ologist as to instruct him and set his thinking along the right channels.

Let us put aside for awhile all modern notions about the universe, and child-like gaze up into the starry heavens whence these contraptions appear to come, bringing the inhabitants of other worlds. We are considering well established FACTS remember, and not fanciful stories, to wit, the sworn statements of eminent citizens of Burlington, Kansas, USA, in the year 1897 AD. Just one such event is sufficient for our purpose, and to ignore this, and all similar phenomena, or to pretend that it never happened, is not very commendable, but it is typical of a crazy world bent on self-destruction.

The evidence is that physical structures carrying physical human beings, and sometimes inhuman beings, are entering into our atmosphere. We are informed by some of our better looking visitors that they are come from Saturn, or Venus, or Mars. Whilst our departed friend George Adamski told us that he had himself been to Saturn. Assuming that Adamski was telling us about real physical experiences (which considerably affected him and which he had no desire to repeat), and that the visitor from Saturn is simply stating a fact, and one confirmed by the experiences of Adamski, how are we to reconcile such statements with the statements of

O, DEC-66

the astronomer? Who is most likely to know best - one who has manifestly traversed space in the way it should be traversed, namely, by a mastery of the gravitational and cosmic forces, or the earth-bound, conditioned human who knows practically nothing of the real nature of the Universe?.

The present writer is not advocating an implicit trust in everything we are told from space, or by "cosmic intelligences". There most certainly is a "lunatic fringe" among those interested in the flying saucer phenomena, and what has already been said about some of our visitors from space should make us extremely wary of such "revelations". There are probably a number of lessons to be learned concerning these visitations from space, including warnings of danger unless human minds are guided along the right channels. It was pointed out in earlier articles that the word of tetragrammaton - all Holy Scriptures - has been provided all down the ages for this specific purpose, namely, that those walls built up in the human mind down the centuries, especially during the last few hundred years, should finally be brought crashing down, i.e., when deity is able to enter into the human personality in sufficient degree to accomplish this by a further major reorientation upon the Tree of Life. We must take the FACTS as they are, and not shirk the issue, even the fantastic IFO and its passengers, and, with divine guidance, finally arrive at an understanding, not only of the UFO and IFO, but of the beginning and end of planetary existence.

Taking the evidence as we find it, and not pretending that these events never happened, or presuming to treat those who have had these remarkable experiences as idiots, or liars, the reconciling solution to the dilemma must be hitherto unsuspected changes in the nature of matter which resolve into changes of states of mind. The effect of these changes upon George Adamski appears to have been very distressing, which fact in itself indicates that a transition from Earth to Saturn is a very dangerous business at the present phase of human development, even when under the control of experts in space. To attempt this transition by rocketry, or to force one's way into the heavens of space, would certainly mean death to the astronaut, as the aspects of Saturn to the astronomer reveal.

Why should we trust the word of the astronomer, whose ideas are constantly changed like socks? The quasi-stars, we are told, exhibit intense ultra-violet radiation and peculiar optical spectra that astrophysicists cannot as yet pretend to understand. These recent discoveries in outer space have, quote:- "produced a revolution in astronomical thinking". Will the outcome be that life is possible on Saturn after all? The problem facing the astronomer and the physicist appears to be that, quote:- "the intensity of radiation from these sources is far too great to be accountable for in terms of therm-nuclear energy, and no really satisfactory explanation is yet in sight".

One reasonable explanation is that, quote:- "the quasars, and the more recently discovered quasi-stellar galaxies, involve gravitational forces of a previously unimagined order." If this be so, quote:- "All our knowledge of physics built up painfully over hundreds of years on Earth are the physics which hold good in extremely feeble gravitational fields. In the extra-terrestrial universe, where gravitational forces attain enormous values, the laws of physics could be quite different". With such uncertainty in scientific thinking; and with the scientific progression exhibiting these constant changes of mind; and with the evidence of the UFO and IFO, and their passengers and crews, where can we turn for certainty as to the planets,

and the sun, or as to the real nature of the Universe? We have stated that the word of tetragrammation - YHWH - or The Real Gospel of The Ages proclaimed by Our Lord Jesus Christ, but which could only be given to mankind in the consummation of the age when The Comforter should arise in the power of The Holy Spirit, as foretold by Our Lord, alone can provide such certainty.

Is there a clue here? Quote: "There are many other accounts of gravitational researches which, like the above, suggest that we may be missing some large vital factor in our attempted explanations. Taken in conjunction with the discovery of the quasars - a whole new class of celestial objects exhibiting energy changes of a hitherto unguessed at order of magnitude - it is not unreasonable to hope that the next few years may see some fundamental changes in the existing limitations of physics. We have been too long ham-strung by the unimaginative mechanistic explanations of the nineteenth century, and the problem set by the quasars are going to require thinking of a broader and bolder kind".

The nature of the problem of the Universe, and of the UFO and IFO, as stated in previous articles in Orbit, is psychological: it is simply a matter of guiding human thinking along the right channels. And to this end, we have declared, are all Holy Scriptures written and preserved in miraculous fashion down the ages, namely, that in the consummation of the age - The Era of The Fourth Great Truth, which is Our Lord crucified - a new reorientation upon The Tree of Life would be effected by Messiah whereby the balance of power would be changed in human nature, thus making it possible for deity to enter into possession of the human personality and establish a New World Order.

During the process of reincarnating deity, all the Heavens are resolved in a marriage of worlds - the four worlds mentioned from extreme antiquity upon clay tablets, in the Secret Doctrine of Israel - The Holy Kabbalah, and in The Holy Scriptures. This it is which makes possible the coming of the flying saucers, and which is producing physical effects and psychological changes, even changing human personality. We have been told by "cosmic intelligence" that a new situation has arisen in earthly affairs, or in human nature, which is described as being "rather a dangerous one". It has been pointed out that the marked date in Great Pyramid symbolism was the year 1936 AD.

ADAM is called the Man of Equilibrium - the human nature being a divinely preserved balance between Heavens and Hells - as is manifest in human personality and all down human history on the planet where the disintegrating personality is resolved and the divine personality re-established - War in Heaven and upon Earth. It is necessary to be aware of these facts about human nature in order to understand the phenomena of the "hostile" or "evil" IFO and its occupants. That which is within human nature is within the new phenomena, both the "good" and the "evil", and like calls to like.

We are back where we started - with the ages long problem of "good" and "evil" - in the matter of the "hostile" IFO on the one hand and the beautiful and benevolent IFO and crew upon the other hand. And the fact that influx from below and above is now impinging upon the physical plane is yet another sign that we are upon the verge of catastrophe and yet another major reorientation upon the tree in order to preserve equilibrium and the human race unto the divine consummation, but with a new balance of powers, as has been explained, lest the divine purpose fail. Such major reorientations within human nature are necessary from

time to time in order to preserve equilibrium, which is the natural, healthy life and sanity for the inhabitants of this planet - Earth.

ADAM - The Human Race - must not plead innocence, nor try and put the blame far out in space, because the contrary will which deity decided long ago to resolve and cause to cease to exist is within himself, even now striving to BE LIKE GOD and assail the very heavens of space, to work chaos in Heaven, as it has on Earth. Yet another sign that we are come to the end of the age - The Age of The Fourth Great Truth, which is The Lord Crucified in human nature these past 2,000 years. Not to worry about the evil aspects, but to repeat and look upwards and within The Holy Word for enlightenment, and not unto "the dead" or even the angels of Heaven, for the power is within Man himself when deity has entered into possession, and HE charges even His angels with folly.

If it will help, we could say that the "spirit of darkness" bound under the debris of space in the makings of a planet is now based in infernal fire at the centre of the Earth, for this country will in opposition to deity is now in part possession of the human race, with the odds in his favour, as 3 is to 2. And occult sources have stated that his sphere of influence only extends as far as the orbit of the moon. Smells and stenches - the sweet odour of flowers or the stink of rotting flesh, and colours, dark and drab, or brilliant with the beauty of the spectrum, are not these indications of the origin of visitants within our atmosphere? The knowledge of correspondences is true heavenly knowledge, and the reader is referred to the writings of Emanuel Swedenborg.

The problem of the UFO, and the IFO, it should be manifest, will not be solved by delving into this kind of phenomena. The answer abides in human nature itself, in the resolving of the ego or personality as deity enters into possession and the human will is identified with The Supreme Will in a growing love and appreciation of all Holy Scriptures - the expressed will of deity down the ages of the world. Since the marked date, the balance of power is being changed within human nature as deity reincarnates, and incarnating beings begin to swing over the balance of power, as 3 is to 2, so to bring in The New World Order wherein Messiah is KING. But, as stated by "cosmic intelligence", this new situation in earthly affairs is "rather a dangerous one" - information which Biblical students have known, of course, for a long time.

When the Earth awakens, to sing The New Song in harmony with all the spheres in Heaven in a marriage of worlds, and human nature has been changed, and human thought directed into new channels, then will the mystery of the UFO, and the IFO, be solved. This is an historical fulfilment worked out upon this planet, and an understanding of this as the result of Messiah's Work within the historical sequence: this will bring the answer to the problem of the UFO, and IFO; it will bring a perception of the real nature of the Universe, and the answer to every problem arising in the human mind.

(Quotations from Flying Saucer Review, September-October 1966.)
