

against the dark night sky, I was able to see its 'cigar' shape.) And it vanished rapidly. Meanwhile the ship's own movement had stopped suddenly. I estimate that the sighting may have lasted five minutes or more.

Special investigators from the CIA subsequently came aboard the carrier. On the pretext that they were allegedly investigating "gambling below-deck"! But they questioned many sailors about this sighting. My own Petty Officer First Class questioned me about what I had seen and I replied that I did not know what it was. After that, I heard nothing more about the matter.

Another U.S. Naval Case this time from the Pacific.

Taken from UFOevidence.com

One evening in 1974 in the South Pacific, at about 11pm, while I was on a Westpac (Western Pacific) Cruise in the U.S. Navy, myself and my two friends were on the bow of our USS Naval Ship (AE 26) checking out the millions of stars and the ships with us. There was a destroyer in front as well as two destroyer escorts on each side of us. We were looking at the glowing algae coming off the prop of the destroyer in front of us, when the water on the starboard side of the destroyer was turned a brilliant orange and in the blink of an eye there was a huge orange/reddish ball of light that came out of the water. It was round and as big as the destroyer. It went over the destroyer and back into the water on the port (left) side of it. We just were there looking at each other for a few seconds with mouths gaping and silence. We three buddies did not talk about it much after that for fear we would be drug tested, but I know that all on the bridge had to see the same thing, and the same on the destroyer because it lit up like daylight when it went over it.

This report brings us closer to the observation those island nations such as Cuba may well be subject to UUOs, Unidentified underwater objects. We can assume that many of the reported objects that pass over their airspace may well emerge or depart from the ocean. FSR is devoting a section of this issue to specimen cases that show how big a piece of the jigsaw may involve ocean going UFOs and their hypothetical bases. A future FSR will feature an account of an abductees reportedly taken to one of these underwater facilities; there is presently only one other British case we have heard of where abduction allegedly took place from a floating seaborne object. The following information primes the reader to consider the probabilities that UFOs may even favour hiding in water. These hiding places include lakes and large estuaries, lagoons and man-made reservoirs and possibly even flooded gravel pits.

Lake Superior F-89 Jet found; disc shaped object lies nearby.

In our spring issue, 51.1, we retold the story of the missing F89 lost while pursuing a UFO over the Great Lakes on November 23rd 1953. As has been the pattern in recent issues, this choice of article immediately

preceded breaking news. A group of Michigan divers operating innovative side scan sonar announced that they had recently found the wreck of the F89 aircraft 500 feet down at the bottom of Lake Superior. The plane was mostly intact and upright forming an instantly recognisable silhouette on the Lake bottom. FSR contacted the diving company and stated that a recent issue of FSR featured the F89 crash. An extract of our letter reads as follows:

"The crux of our selection of articles on the subject of aircraft crashes associated with UFO encounters suggest that a physical energy field surrounding the UFO is a hypothetical source of damage to the aircraft lost in this way. Our main article in our latest issue advocated a theory of a collision with a physical energy barrier surrounding the UFO or alternatively a complete propulsion failure which is also commonly observed in these encounters. We would be interested to hear if the wreckage images have been assessed to see if they are typical of a ditched aircraft or an aerial collision."

Dear FSR

We are releasing the side scan images of the mystery object within the next day or so (pending our website manager posting them). We have not released any information as of yet regarding the object, but I will tell you that it is metallic and bears a "strike mark" that matches the hole where the left wing of the F-89 used to be. This indicated to us that a collision took place. The object is ploughed into the lake bottom a little over 200 feet from the aircraft wreckage.

*Thanks again,
Adam Jimenez
www.greatlakesdive.com*

Additional background information about a possible UFO flap at the time of the 1953 F89 crash were recently published in George Filer's "Filer's Files." He states "several years ago I interviewed a radar operator from the 665th Radar Squadron, whose GCI call sign was Pillow. It was located at Calumet Air Force Station on Keweenaw Peninsula that juts out into Lake Superior. He was assigned there at the time of the crash and claimed UFOs were frequently seen on radar coming in and out of the Lake. He personally had received calls from the Upper Michigan Police claiming they were observing UFOs flying over them at low level."

A recent image taken from Silver City, Michigan on 17/02/05 shows a disc shaped flying object descending towards Lake Superior. Are these the typical repeat sightings of a window area? Image taken from UFOevidence.com

Taken by Bob Simmons UFOevidence.org

Thoughts on submerged Objects and USOs

All cases taken from UFOevidence.com

How many of our total UFO sightings originate from craft emerging or departing our oceans. This unknown weighs heavily on any aspiration for mass monitoring by civilian organisations who wish to track these objects. Perhaps we have grossly misjudged what pertains to normal UFO behaviour. What is patently obvious about the aqueous UFO craft is that they are identical objects to aerial UFOs: they do not seem to need to modify themselves to function underwater. They also move in the ordered deliberate way one would expect for a piloted craft to behave when undertaking risky manoeuvres such as take off or landing.

USO Takes to the air in Malaysia 2005.

On the morning of Saturday October 8th 2005 at Kota Kinabalu, Sabah, Malaysia, while at the beach we sat on the concrete steps facing to the sea to the West. It was 7.05am and the sun was already shining very brightly when my wife noticed something unusual on the water about 500 Meters off shore and she brought my attention to it. What I saw looked like a strip of white

Artists impression

wave breaking on the water surface and I told her that. However, instead of moving toward the shore, the 'wave' was moving across the water parallel to the beach away towards our left. She then asked me whether it was a dolphin instead, but I told her it was moving too fast for even a dolphin and probably way to big. The white strip of wave was at least 8-9 Meters long, by my estimation. It was definitely not a boat, because what I could see was just a strip of water breaking on the surface and nothing above. After about 2 minutes and maybe a thousand meters from where we first noticed it, a grey/white craft broke out of the water right where the white wave was and it continued to move in the same direction except this time it was flying in the air. From what I could see, I could not make out any conventional means of propulsion that I know of, no propeller, no rotors, and no jet exhaust and completely silent from where I was. After another couple of minutes or so the flying vessel disappeared in the distance. It never headed toward the skies, but in fact disappeared somewhere among the distant hills. George Gregory Matanjun, Catholic lay minister.

UFO lands in a lake and becomes a USO. **Washington USA**

I was visiting a friend of mine who resides on top of the suburban area named sky mountain (on Cougar mountain) which overlooks Lake Samammish in Washington USA. It was during the moment when I was about to leave when something strange caught my eye. At first I wasn't sure what I was looking at. However, upon closer observation, I noticed that I was an elliptical disk like object skimming along the surface of the lake. At first I thought it was barely underneath the water, however it suddenly manoeuvred to its side in a swift graceful movement. I realised that it was directly above the lake. The object continued to skim around the lake in a wide circular path but gradually began to submerge underwater until only a small part of it could be visible to the naked eye. I couldn't locate the object anymore.

Flying submarine (Cigar USO) takes to the air **from submerged position. Washington State.**

I live in a house about 75 feet from the seawall in Seattle Washington. My room has a big window that faces the ocean. I woke up and about 3:30 in the morning and had to go to the bathroom, when I came back to bed I looked out at the ocean and saw a strange light. It was in the water, under the water, I thought maybe a boat had sunk close to the seawall. I put on some sweats and a coat and went out to look and see if anyone was in the water. It was foggy but I could see out at water level for a couple of hundred yards. I got to the seawall and the light was bright, blue and yellow, it was about 30 yards out from where I was standing. It moved slow away from me and got brighter, then when it was almost out of the water it got dimmer. The thing came up out of the water, it was shaped like a blimp, like a long fat cigar, it had to be 150 to 200 feet long and a dull shiny colour like pewter. The lights had dimmed a lot but I could still see it real clear. It stopped about 20 feet above water and just hung there for about 30 seconds then went out just

above the water a couple hundred feet then it went up and was gone with a flash. Witness works for aerospace industry.

Flying disk dives into ocean in Honduras,

I was sitting in front of our house which located on the ocean front and while I was looking at a big cloud approaching the coast line, suddenly a UFO appeared flying from west and east, then changed course back to west and dived into the ocean. I saw the UFO from 200 yards approximately. The side was like a flying saucer with a dome shape on top. Its dimensions were 12 "long by 8" tall approximately. The colour was a dull metal silver with little rectangle windows located at the base of the dome. The windows appeared to be covered by white dull plastic from which a dim white light could be seen through the windows. The UFO did not make any sound while flying or diving into the ocean. The witness was a school teacher.

Flying Triangle descends into the ocean 2005. Honolulu Hawaii.

Thee M. Brunson JR an electrical engineer writes I had my own 1989 sighting where a triangular craft split into three over the ocean viewed from Ewa Beach Hawaii. It split into three lights one to the East, one to the West and one straight up into space. A close friend who is a fisherman described a large black triangular craft flying out over the ocean while he was fishing in 2005. It flew over his boat then it flew straight down into the ocean and disappeared into the deep. Could it be that this craft has underwater capabilities? Why into the ocean? Could

there possibly be a tie in to some kind of instillation or base under the ocean? I have not so far read any accounts of this black triangle craft entering the ocean. I am nnow wondering just who is really manning these triangular craft.

FSR comment: in recent issues of FSR we have concentrated on hypothetical UFO physics, namely Donald Pilsz's pioneering work on a theory of UFO generated wormholes and the generation of anomalous clouds and refraction spectra. The following article by Dale Tyler examines the effects of UFO fields on large bodies of water. Like the soft spot theory it is a further homage to the monumental power of the vortex at the centre of the UFO mystery.

FSR asked Carl Feindt about the purpose of his study on USO's.

He replied: I call my cases "Water-UFOs" as there is really no such thing as a USO. They are both the **same craft**, therefore why separate acronyms? If you get involved with these you get UAO (Underwater Aquatic Object), UUU (Unidentified Underwater Object) and the list goes to about 20 more - Why bother... Your boy (Shakespeare) said it well... A rose by any other name... Is still a UFO (**Unconventional** Flying Object). My focus on UFOs was because I'm an Aviation Nut from age 6 to now (68), and Aircraft CANNOT go into and under water. **I want one of these guys!** On my site is a paper that I presented at the MUFON Symposium this year regarding the "Physical Influences of a UFO on Water?" I also have a paper I'm working on regarding "Heat and Water UFOs" but I'm going to need some physicist's help with that.

Physical Influences of a UFO on Water

This page is dedicated to Lucius Farish and Dale Titler who, as pioneers in this field, began to recognize the physical effects of unidentified objects on water.

Physical Affects on Water - Tying It Together

By Carl Feindt © 2005 <http://www.waterufo.net/PlufoW.php>

The following proposes a possible explanation for the observed interaction between unidentified flying objects and water. Wrested from seemingly divergent eyewitness accounts, it posits that the reaction of the water around an emerging craft implies the existence of a displacement field, one that exhibits electromagnetic tendencies. What at first seems like a series of unrelated accounts is shown to illustrate consistent behavior when the distance between the object and the body of water is considered.

My interest in water-related UFO sightings came long ago while reading the books that have interested all of us. However, those books usually had only one water-related case in them. The mystery to me was: How something so profound could be neglected? Why was there no book - or even a chapter - exploring the UFO's ability to operate in and out of water? As time went by,

books were published with short chapters on the subject. Finally in 1970, Ivan T. Sanderson published Invisible Residents, which described water UFO cases from front to back. However, the idea of how they accomplished their penetration and emergence from water was once again overlooked in favor of the concept of another civilization residing underwater on our planet.

Scientists use repetitive results as proof of the conclusions of their experiments. Ted Phillip's investigation into trace cases does a similar service to UFOs. Water, unfortunately, dissipates any physical evidence due to motion of the liquid or dilution of residual traces. However, could there be solid evidence in the form of repetitive verbal testimony? On starting the collection process of UFO cases I had no concept of what I might find. I only wanted to gather all the cases I could to see if they fit any physical pattern

Why should we get excited about a few water-related reports scattered amongst our ever-popular UFO cases? Because in these cases we can see the path of what we must accomplish in order to actually travel to the stars. A new propulsion system and a field surrounding the craft protecting it from micrometeorite hits, acidic climates, hostile gunfire, and whatever else the craft encounters. If we wanted to send men to Venus, material would have to be developed to withstand the heat and the acidic atmosphere of the planet. However, if we could design a vessel based on the "alien" craft we have experienced over the past fifty-plus years, no further modifications would be necessary.

An analogy to a light bulb can be drawn here: If we think of the filament as the functioning craft and the glass bulb representing the UFO field, we can see that this bulb protects the fragile filament from atmospheric intrusion and other damage. In the majority of UFO cases it is undoubtedly the function of the field to protect the UFO; the speeds that are recorded would cause a tremendous heating of the surface of the vehicle due to atmospheric friction, not to mention the possible collision with other aerial craft or life forms. The function of the field may not be limited to protection. The field might also be a part of the propulsion source, although nothing has been proven or observed along this line. Paul Hill's book *Unconventional Flying Objects* just about cinched the idea of how this craft could do what it does in water. In Chapter 13, "Silent Supersonic Operation," he explains that the field moves the molecules of atmosphere it contacts to its rear. A molecule of water could be moved in the same way; in physics, our atmosphere and water are both governed by the one physical principal, that of "Fluid Dynamics."

As I continued my collection of reports, the major problem was not the lack of incidents, but the lack of text on what the water was doing during those incidents. For the most part, the cases report UFOs going into or coming out of water and then go into detail about the craft or its travel. This is understandable as the craft is the unusual thing, not the water. I eventually became frustrated that there was no clear correlation between what was occurring with the water in the different reports and began to think that perhaps all these disjointed cases were leading me nowhere. One night I sat at my drafting board and decided to draw each case group as a filament surrounded by a bulb. The resultant drafting work came as quite a shock to me.

It should be noted that this hypothesis is based on what could be considered a small percentage of the more than 850 cases contained on this site, and does not take into consideration any testimony concerning UFOs entering bodies of water. The following sections will illustrate the various phases of UFO reaction with water.

The drawing at the beginning of each section represents a simplified idea of the UFO field -- which has many times been referred to as "electromagnetic," and to that end I show the UFO as if a bar magnet had been inserted into its center. This concept was inspired by a sketch of a UFO with a surrounding magnetic field from an older addition of *UFOs and Anti-Gravity* by Leonard G. Cramp.

(Put a bar magnet into the water and it will NOT produce the results shown. So while it may have a similar flow of the surrounding field, it is not a simple magnet.)

Each drawing is followed by a description of that phase, along with a demonstrative excerpt from published eyewitness case testimony. (Additional supportive cases are mentioned at the head of each section.)

UFO COMING UP - "WATER BULGES"

Terms used in relevant cases:

- 09-LL-1954 "Elevated turmoil" and "the water had formed into a plateau"
- 03-LL-1959 "Water swelled"
- 06-03-1961 "the surface of the sea was bulging like an enormous ball"
- 09-24-1961 "The surface was rising in one spot", "Looked like a round hill"
- 08-08-1967 "Wrinkled up or stirred up"
- 09-??-1971 "Producing the normal rise of water"

Figure 1 (Underwater) Notice how if this idea is correct, the force is pushing upwards, causing a bulge.

In this section we should visualize ourselves in a boat, leisurely enjoying the ocean view, when suddenly we notice a strange sight. A section of the water within our view appears disturbed. At first it is like the water is boiling, with bubbles coming to the surface, but within seconds the surface becomes more agitated and appears to be rising and flowing violently. Suddenly all this ceases as we are faced with a "craft."

The following cases display this scenario with greater elegance:

09-LL-1954

ENCOUNTER IN THE GULFSTREAM

by Neil Deane as told to George Earley

Some morning, I've forgotten which one, because I have long since lost the log book, I was rudely awakened in that dark, cold hour before dawn, realizing that my forward progress had stopped and that I was taking water. Great sheets of water flung over her forward deck screaming down the sides of her cockpit foaming, some

of it coming aboard. So in under shorts and barefoot, and the rest of me bare, I came suddenly awake, went into the cockpit and discovered she was dead on course, sails drawing. But she was not making any progress while over her forward deck was considerable depth of solid water and **a great thrashing up ahead.**

Looking in the direction of the thrashing, I perceived a great glow, like a big school of herring coming near the surface and disturbing luminous bacteria . . . only it was not the right Color. It was more deeply orange. In color it was like the annelids, which are common off Bermuda in certain seasons, but this was one continuous glow and not a collection of nickel-sized blobs of light. The glow seemed to come from **a plateau of water**, which was causing solid water to flow over my decks, hence impeding my forward progress.

So, thinking I had gone ashore, even though nothing was grating under the keel, I charged up her auxiliary engine, slapped in reverse gear, and backed away. In a few yards astern I was in dead calm water so I took in her sails and when I was squared away with power-plant running nicely, I put her into forward gear and went back towards **this plateau of glowing water and light**...

On seeing this "windjammer" apparently bearing down on me, I had gone into reverse gear again, backing off once more into calm water . . . perhaps a hundred yards from the disturbance. Even as I realized my "windjammer" was something else, **the splashing and sloshing of water stopped, and this vessel, or whatever it was, rose out of the water** and the glow surrounding it subsided so that her running lights were much more highly visible. She had lifted off the water and was heading towards the now dimly visible continent of North America in a long, upward slant and going **at what seemed to be a tremendous speed.**

This reference (Original): BEYOND REALITY #18, January 1976, "Encounter in the Gulfstream" by Neil Deane as told to George Earley.

UFO JUST ABOVE THE SURFACE "WATER DEPRESSION"

Figure 2 Notice that in this position the force upon the water is pushing downward.

Terms used in relevant cases:

Indentation of waters surface

- 06-12-1958 **France** "see the water being whipped up all around it", "making waves"
- 09-24-1961 **Poland** "hole in the waves"
- 03-29-1974 **Africa** "sea not flat but dug in the form of a depression."
- 03-29-1974 **UFO Contact from Undersea** by Dr. Sanchez-Ocejo and W. Stevens).

In these cases the UFO is seen "just" above the water, its field acting as a plow while it invisibly moves water in the direction of the witness. In several cases where the UFO did not move in the direction of the witness, but simply continued upward, we find the terms "tunnel" or "hole" used to describe what was observed below the UFO. Indeed this tunnel idea was expressed in a story of abduction where the witness saw "strange walls of the tunnel" as he traveled below an ocean

A DEPRESSION AND A MINI-TIDAL WAVE.

They then were afraid of being dragged away in the water and not being able to regain the shore. A.W. succeeded in grabbing the trunk of a coconut palm. He held on with his right arm, holding on to the woman with the other. At their feet was now a continuous barrage of strong waves, so that one instant before the sea came within 50 m of the dune!

Suddenly, three bright lights showed on the object blinding the witnesses. It was like three projections pointed in their direction, other luminous beams coming from the sides of the object, perhaps also from its upper side or from the unseen side of it. Certain of the beams seemed oriented upward, but A.W. could not confirm this, so much did the three beams pointed toward shore blind him. In all the light it was white that dominated, but there was also yellow, pink and blue-green. A.W. wore glasses that were lightly tinted. He was struck by the blue and green colors of the waves lighted by the object. **The most interesting detail of his recount concerned the surface of the sea under the object. It was not flat but dug in the form of a depression.** A.W. estimated its depth at a few meters, 5 or 6 perhaps. Its diameter was comparable to the length of the object, on the order of 25-30 meters.

SEA SURFACE DISRUPTION

Two elements in the account of A.W. present an import interest for those who try to imagine the physical phenomena accompanying eventually, the UFO sightings:

These are the descriptions he made, on one hand, the depression dug in the sea under it and on the other hand, or the advancing waves on the beach up to the dune. It is not possible, given the condition of the observations to obtain a very precise description of the profile of the **depression (cup)**, in particular of the bottom of it.

This reference: Phenomenes Spatiaux (Space Phenomena) a publication of GEPA, GROUPEMENT D'ETUDE PHENOMENES AERIENS (Group for the Study of Airborne Phenomena). Dated March 1976.

ABOVE THE SURFACE BUT CLOSE "WATER MOUNDING"

Terms used in the text that follows:

04-??-1958 "beneath the saucer the sea water was turned up."

Figure 3 Notice here the water, assuming the shape of the upward flow of the field apparently entering the UFO.

This is probably the single most important witness sighting in terms of understanding the total effect of the UFO upon water. There have been similar descriptions in other accounts, but they are usually tempered by terms like "upward swelling" or "raised water," language that does not clearly show a mounding or mountainous form. We have here a fixed view of an effect, but also the beginning of what might occur when the craft moves farther up vertically.

04-??-1958

Between Maceió and Parapueira, Brasil, April 1958.

On the north-east Atlantic coast a business man and several fishers were witnesses of a saucer-shaped-object, which came down from the sky and hovered above the water in about 40 meters distance from them. Beneath the saucer the seawater was turned up (see picture) and bubbled, as if it was cooking or drawn up by an invisible power. The object was as big as the tent of a touring circus and was about 15 meters above the water's surface. (Cramp 1966)

This reference: Piece For a Jig-Saw, by Leonard G. Cramp, p. 133, London, 1966.

ABOVE THE SURFACE – "WATER SPOUT"

Terms used in relevant cases:

08-LL-1914 "then rose from the bay surface sucking with it a heavy upsurge of water"

08-27-1917 "it was as if the water was being drawn up to it"

02-??-1955 "a huge geyser of water"

09-24-1961 "a whirlpool of water rushing upward with a loud sucking and gurgling noise"

??-??-1964 "it was like a funnel sucking up water" "It

brought the water up with it due to the fact that it was whirling so fast"

08-??-1965 "a gigantic pillar of water rose as the sphere emerged" "Collapsed – later"

03-26-1966 "greenish volume of light, water or vapor extended from the underside of the object down to the surface of the water"

08-04-1971 "Three vortexes came out from the sea and from inside them an object appeared"

07-??-1977 "could see the water of the lake surging upward" "as if being sucked into the machine"

10-23-1978a Column of water "hovered 100 feet high by 15 feet wide before falling fanlike into the sea"

07-17-1992 same as 10-23-1978a "sucking up a column of water almost as wide as the UFO"

04-26-1994 A center plume of water shot up to the bottom of the UFO

Figure 4

This type of case involves a UFO hovering over water. The witness describes a column of fog, mist, haze or water reaching from the surface to the object. The terminology generally used in the description is "sucking up water". This column, I believe, is caused by the rotation of a field in a vertical plane that encompasses the UFO. This is best visualized by going back to Physics 101: Imagine a bar magnet running vertically through the center of the UFO, iron filings sprinkled on it so as to observe the magnetic lines of force going up from the top (North Pole), arcing to the sides and down, then back up through the bottom (South Pole) – **see figure 4**. As this field rotates it causes a friction on the abutting atmosphere, causing an updraft at the bottom. This, in addition to an observed horizontal rotation of one part of the UFO causes a swirling vortex to be formed below the UFO. This can be similar to a person rotating a finger through still waters in a pot of water at a rapid rate – eventually causing a maelstrom to occur. Could this not be the cause of waterspouts?

Waterspout: Definition – New Illustrated Webster's Dictionary, 1992. a moving, whirling column of spray and mist, with masses of water in the lower parts, accumulated because of a tornado at sea or on other large bodies of water.

In Ted Phillips' book *Delphos* he presents the following from a case from October 10, 1957:

"Witness heard a whistling sound and saw a circular object descend to within 6 feet of the ground. It hovered 2 minutes, **sucking up leaves**, grass, and dirt. White material was found at the site, covering the grass in the disturbed area."

Let's get heavier:

From *IUR Winter 2002-2003*, p. 9, "Timmermania: A step too far into the Timmerman Files?" by Michael D. Swords; a case in the early 1970s:

After four or five minutes of waiting, the ball backed away. Across the road, **it began creating a vortex** at the base of the mountain.

The rocks started rising into the air... They would shake from side to side. There were **hundreds of them** [the largest about the size of **melons**]. They started **going around in a circle**, like it had complete control over them... Then the thing went way up in the air and it looked kind of like a tornado and it was all red... The only noise you could hear was this clickety-clack, clickety-clack when the rocks hit together. Then the light blinked out, and **everything crashed down** the mountainside and onto the road. The ball blinked back on again at the top of the mountain and meandered away.

And heavier yet:

In Bob Pratt's book *UFO Danger Zone* the dresses of a few women are pulled up and over their heads; also in another case, a man dangles below the UFO, without the aid of the usual **truncated beam of light** that is so prominent in abductee literature.

And more non-water cases:

08-13-1947 Snake River Canyon at Twin Falls, Idaho... On each side there was a tubular-shaped fiery glow, like some sort of exhaust. **He said that when it went over trees, they didn't sway back and forth but rather the treetops twisted around, which suggests that the air under the object was being swirled into a vortex.**

This reference: *UFO FBI Connection* by Bruce Maccabee, pp. 13-14, © 2000

02-01-1948 He noticed what seemed to be propeller-like lights running around the concave bottom of the saucer. "One detail in connection with the silver-bottom section I noticed very clearly. **There was something whirling around the bottom section, sort of like a big propeller or a series of propellers might do. The movement was clear; the bottom part did not turn. Something kept whirling**

around the whole thing," he told, the Circleville Herald.

This reference: *MUFON Journal #432*, April 2004, "Farmer's report of UFO hovering over buildings still believed 56 years later" By Joel Barrett *The Circleville, OH, Herald*, 02/02/2004 plus many UFOCAT references.

06-??-1963 Costa Rica... The second object moved towards the far side of **the crater** and, having crossed the **column of ashes**, performed similar manoeuvres before disappearing **behind the volcano**, in full view of the principal engineer, who was some distance away from Castillo and his colleague. **Both craft seemed to induce a kind of whirlwind effect, as though 'produced by a propeller rotating at high speed'. Castillo reported.**

This reference: *Unearthly Disclosure* by Timothy Good, pp. 58-59, © 2000

05-20-1967 **The Steven Michalak Incident at Falcon Lake, Manitoba, Canada.** Paragraph 6. The attached photographs were taken at the site.

No 1. Taken from approximately 12 feet up in a tree facing in a south-westerly direction, **showing the outline of an approximate 15 foot diameter circle on the rock surface where the moss and earth covering has been cleared to the rock surface by a force such as made by air at very high velocity.** For comparison, the prospectors ax and Beta counter were left in the **approximate circle center.**

This reference: *From documents of the Canadian Department of National Defence, Training Command Headquarters, Westwin, Manitoba. Dated: 1 Sep 1967. With Thanks to researcher Don Ledger, for forwarding to me.*

09-02-1967 England. Staffordshire, Stoke-on-Trent, bentilee... it flew low overhead and apparently landed in a field about 400 yards away. No sound was heard, **but one witness felt "wind" as it passed overhead.**

Reference: *Alien Invasion or Human Fantasy? The 1966-67 UFO Wave* by Richard H Hall, p. 107 © 2004

This **"suction" on the surface of the water** is exactly the same as if a tornado was to pass from land over a body of water. The bottom part would be viewed as a **mounding of water**; as we look vertically up the column, the water is more molecular and appears as fog, mist or a continuation of the water itself. The vertical movement of this water or water vapor gives the impression of water being sucked into the UFO. An example of this column can be seen in a photo by Ed Walters from Gulf Breeze, Florida, which was published in a book by him and Dr. Bruce Maccabee, entitled *UFOs Are Real and Here's the Proof*. One has to look closely to see the column, but it is there, silhouetted against the darker water (See **04-26-1994** on my website for sketch and photo kindly provided by Dr. Maccabee).

As the UFO gains altitude, the column of water is seen

to collapse, or in the case of night sightings – disappear. Separation of this column is almost predictable, as the height of the UFO above the water and the size of the UFO (governing the width of the field) itself, probably determines how much water weight the vortex can sustain. It would be interesting to compose a table with these figures, however due to fright or awe on the part of witnesses, most of the time these details are lost:

07-17-1992 Taking on Water They pulled their sail down to slow their boat to avoid a collision, but when the ship approached their boat they realized it wasn't a ship. It was a UFO with a lot of lights on it. **It was sucking water up into it** and passed slowly within twenty meters of the boat, but **the fishermen don't think the UFO saw them. It just went by them about six meters above the water, sucking up a column of water almost as wide as the UFO. The water didn't fall back into the ocean.** The UFO went past them and disappeared in the distance. This reference: UFO Danger Zone, by Bob Pratt, Published 1996, pp. 231-232.

04-26-1994 UFO "TAKES A DRINK Below the UFO the water began to chum. Mist swirled into the air. **A center plume of water shot up to the bottom of the UFO.** It was a waterspout. The UFO moved slowly to the left and I aimed the camera and took Photo 49. **(See case 04-26-1994 – CF-)** Ten to fifteen seconds passed while I stared at this amazing scene. **Suddenly the waterspout collapsed. The UFO angled off to the left, climbed at a sharp angle, and disappeared into the hazy sky.** This reference: UFOs Are Real And Here's The Proof by Edward Walters and Bruce Maccabee, Ph.D., pp 56-57, 100-105 © 1997. A FUNCTION OF HEIGHT?

Figure 5

These cases of witnessed effects on water inspired the idea that these effects might be tied together in relation to each other. Some of the cases are of a UFO apparently **"taking on water"** not by means of tubes, pipes or hoses (as is the case in several reports), but by **a column of water lifted by an unseen force directly to the craft.** In the other scenario the UFO causes an observed "indentation" of the water. It would appear that these reports are contradictory of each other because of the differences in the effects; however, I believe that the differences are only the result of distances between the field of the UFO and the water.

In **figure 5**, we have what could be an illustration of the complete steps of the UFO's exit from a body of water, and the water's reaction as it does so.

These craft operate by physical principles! Though the details behind their operations are unknown to us, they should not be considered **beyond our understanding.** Excusing the craft's functions as paranormal, or that of **holographic projections**, or the result of some other impenetrable obfuscation is not the way to understand the physical principles governing its technology. We should concentrate on the craft's mechanics – because it is clearly a **machine.**

Another Missing Week long Abduction, this time from Portsmouth England

Hilary Porter.

During the **summer of 1989**, a young man called Paul, 17 years of age at the time, was walking home after an evening out with some friends at the fairground and arcade situated on the sea front. As Paul neared his home, (which was just round the corner from the busy main road which he was walking down), he became aware of the familiar figure of another friend of his, just across the road from him. His friend was waving frantically, as if to gain his attention, but Paul soon realised that it wasn't his friend at all as the person

suddenly **shape-shifted into another image** altogether. As he looked on, **the figure suddenly levitated** about 8 inches from the ground, with its feet pointing downwards in the air as if on tiptoes.

For some reason Paul felt no fear. **The figure floated** and fluttered across the road towards Paul, then it started to **make some weird hand movements** for about four minutes. It was at this time Paul became aware that **everything around him was totally silent.** It was only
