Editorial: The reformation.

Are we living in a new age of intellectual heresy?

"A new fact is battling strenuously for access to your ears. A new aspect of the universe is striving to reveal itself. But no fact is so simple that it is not harder to believe than to doubt at the first presentation". Lucretius (De Rerum Natura 59BC).

The Reformation began on October 31, 1517, when the German monk Martin Luther nailed his ninety-five theses to the Castle Church door in Wittenberg, Germany. Although not initially a libertarian movement, this act injected new ideas of personal religious freedom into the extraordinary new age of reason that was already dawning across Europe. This was the beginning of the end of arcane medieval practice of placing fixed boundaries of state religious control around those seeking new independent scientific verification of how the World worked. One hundred and fifty years later; Isaac Newton faced the final throes of the old World's morbid fear of those who were the freethinkers. Newton's first scientific paper on light and colour published as a young man at Cambridge in 1672 (in the *Philosophical Transactions of the Royal Society*) is regarded by many as the first scientific paper of the modern age. Newton's revolutionary contributions explained the workings of a large part of the physical world in mathematical terms, and they suggested that science could provide explanations for other phenomena as well. Despite his genius during his lifetime he faced embattled Jesuits and Benedictine monks and a regressive King James II, intent on restoring the old obeisance towards church and state supremacy on such matters. The freethinkers of science triumphed alongside Newton's victory and their legacy has continued to prevail for more than three hundred years hence, but as is the sage lesson of history; each individual step has been won at great human cost. Three hundred years later, we may well ask if the scientific world today enshrines those same hard won ideals of freedom of personal conviction when it comes to dealing with new laws that relate to a world inclusive of UFOs and related theories of UFO physics that radically change the way we see our scientific laws operate.

What ufology faces is a heretical struggle to unite science and metaphysics. Nicholas Hagger states in his book *The Universe & The Light* (1993), "Such a union would in fact be a reunion, for the founders of the Royal Society (founded in 1660) such as Boyle, Wren, Moray and Newton were steeped in the esoteric, metaphysical traditions of Freemasonry,

Rosicrucianism, Neo-Platonism and Hermeticism.

Metaphysics is derived from the Greek *meta ta physika* ("after the things of nature"); referring to an idea, doctrine, or posited reality outside of human sense perception. In modern philosophical terminology, metaphysics refers to the studies of what cannot be reached through objective studies of material reality. Continual developments in our understanding of the human thought process reveal to us that science cannot solely be relied upon to explain reality; for the human mind cannot be seen as simply a mirror of the natural world. For example, since the act of scientific observation itself tends to produce the reality it hopes to explain, the so-called "truths" of science cannot be considered as final or objective. This fact manifests itself over and over again, as scientific truths and laws continue to break down or yield to new and better explanations of reality. What becomes apparent, therefore, is that the process of human interpretation in the sciences, as elsewhere, is both variable and relative to the observer's viewpoint. <http://www.meta-library>.

A belief that all complex systems can be completely understood in terms of their components and everything in life is reducible to substance is called reductionism. Robert Kingsley Morison in *Disctech* (1997), a book on UFOs and vortex theory, is uncompromising on what he calls mechanistic determinism, a similar belief to reductionism that fixes in peoples minds in their earliest exposure to science. "All the mysteries of animate and inanimate nature are supposed to be explicable in terms of machinery, chemical reactions and electromagnetic waves. Science teachers reiterate 'properties of matter,' which are mostly unintelligible designations brandished by the experts to discourage the peasants from asking awkward questions. Most of the 'explanations' are only descriptions based on assumptions which have been made for the purposes of discussion, but anyone who disputes the assumptions is automatically chargeable with heresy. The feeling one gets from the 'properties' and 'explanations' is that the master or mistress has dispensed enlightenment. If one takes the names of these 'properties' for granted, one deludes oneself into believing that the underlying realities are understood. A submissive acceptance of magical incantations by a susceptible audience is a sure way of losing touch with actuality".

An impression of how a bold move away from the reductionism of the scientific establishment would be perceived is illustrated in an illuminating quote from Bruce Cathie in his book *The Energy Grid* (1990) "As long as the public at large did not insist upon answers to controversial questions, the groups members, whoever they were, were apparently content to let matters quietly take their own course. No doubt hopeful that eventually I would be branded as just another crank and that anything I had put forward would automatically be discounted." Cathie recognised all orthodox channels were closed to him; there was no room for his unthinkable proposition among the scientific community. He chose to bypass this barrier and talk directly to the common man in his famous series of harmonic paperback books.

Trevor James Constable describes in *Loom of The Future* (1995) "The reason that so little of this gets across to people without anything other than an orthodox background, is that everything you are doing is invisible to them." Constable goes on to discuss Wilhelm Reich's theory of 'armouring' a behavioural change entrained in the sense organs of overly orthodox observers that allows them not to physically see that which they cannot readily accept. Constable regards Reich's theory of the armoured man as the real culprit in blocking progress toward new life-giving and life-enhancing conceptions.

He adds, "Once you realise that you are up against something structural in this irrational opposition to what is radically new and truly revolutionary, and understand the unchanging nature of that structure, then you cease to be frustrated. Two things become starkly clear to you. First, you are going to lose out anytime you seek to approach rationally a system that is rooted in irrationalism, even though it is the norm in society, most people are not aware of this because they are totally

immersed in irrationalism since babyhood. Secondly, you direct all your energies and strength to getting the firmest hold of the new ways". Both of these authors have suffered 'mental opposition' as they have promoted ideas of an alternative energetic reality that take us back to the heretical theories of ether and ley energy. Both Constable and Cathie are typical of "natural philosophers" in ufology who use observation, deduction and instinctive reasoning to build the first steps necessary to get us on the road to discerning a far less mechanistic world order.

The experiences associated with UFO contact tell us that our observer's viewpoint has moved radically and the relationship with what we see in our universe is fundamentally different to everything currently on offer from orthodox science outside new ideas arising from physics and the concept of quantum fields and fields of consciousness. We ufologists acknowledge that various aspects of the mind once touched upon by ripples of the UFO phenomenon will not fit back in the box. However, some of our sternest critics, the social scientists and psychologists, come to the table with redundant fixed views that cling to the belief that the objective phenomenal world alone is real. They are not spokesmen for reason, but voices of the old guard rallying against a radical new discipline (in historical terms) called ufology. We are brazenly hammering in our new sheets of ideas to their castle doors and they don't like it. We are not disestablishing scientific authority, we are renewing it.

For the purposes of this subject we are all laymen. At *Flying Saucer Review* it remains a policy to represent direct experience of the layman who has observed flying saucers and their occupants at close quarters as an independent source of scientific validation as to how they behave

Portal technology and a theory of the 'soft spot'. A review of the sighting reports.

Donald Pilz. E-mail (donaldpilz@yahoo.com)

Website (<http://www.softspotopening.com>)

This is an update article to my "Soft Spot Theory" In *FSR VOL 50/3 Autumn 2005* I described anomalous ring shaped clouds that featured in Doppler (weather radar) images taken synchronously to my 1996 UFO sighting in Southern Indiana.

Among those properties of UFOs that are surely considered the most problematical is whether they routinely manipulate our space in a manner to form a conduit or wormhole. So vast are the internal structural forces required to create these anomalies that scientific orthodoxy considers it irrefutable that this feat would require the kind of ultra-heavy masses that would originate from collapsed stars. Wormholes are purported to form incredibly destructive, unstable space and time distortions as they exist for nanoseconds in a state of constant collapse. Our research astronomers currently scan the spectrum of the heavens for evidence of such prize rarity, if indeed such occurrences do indeed exist in some infinitely remote corners of our galaxy. However, some theorists are questioning if we have really understood where these rips are to be found, perhaps a lot closer to home?

"Earth's Atmospheric Black Holes and other Dimensions"

In the Oct. 15, 2001 issue of *Physical Review Letters*, Landsberg and Dimopoulos predicted that the Large Hadron Collider may crank out a black hole every second. Around the same time last fall, another pair of researchers independently came to similar conclusions.

There's no danger in manufacturing such black holes, claims Andreas Ringwald of the Deutsches Elektronen-

Synchrotron laboratory in Hamburg, Germany. If black holes are in fact produced in future colliders that would mean they also have been relentlessly zipping in and out of existence in the atmosphere for billions of years. People "should not be afraid," Ringwald urges. Feng also notes that the little black holes would be too fleeting to gobble anything up.

Wowed by the possibility of creating black holes in a collider that will soon be operating—and tempted by the possibility that cosmic-ray detectors might beat the Large Hadron Collider to the punch—Feng and Alfred D. Shapere of the University of Kentucky in Lexington calculated rates for atmospheric black hole production from cosmic rays. Cosmic rays would produce a few atmospheric black holes somewhere in Earth's atmosphere every minute, Feng and Shapere report in the Jan. 14 *Physical Review Letters*.

In the next few years, scientists will tune in to these and other possible signals of both local and distant black holes. If they're really lucky, they'll detect subtle ripples from far-flung black holes embedded in space-time as we know it, maybe even telltale particle bursts from micro black holes ensconced in hidden dimensions right over their heads.

Then what are we to make of modern-day scientific tales of immense collapsing star masses many millions of light years away and more local micro-wormholes lasting only fractions of a second when UFO reports commonly describe a local rip in space time that is big enough to sail a large object through which lasts many minutes. What is more the UFO rips this hole without a catastrophic birth from the death of a star or random actions of cosmic rays and appears to be locally benign and quite stable. A crucially important observation of these 'energy portals' is that these black holes appear to be generated by alien craft and therefore can be assumed to be appropriately attuned to our atmosphere and under intelligent control. What can we learn about such physical apertures from their frequent observation associated with UFO activity? I believe reports of these apertures have been overlooked. They are critical to our understanding of what we are in fact witnessing. The true story of dimension crossing technology has remained hidden from our society.

Sunniemi, near Pori, Southwestern Finland, 25/10/85, 6.02 am taken by Mr Pekka Eriksson.

Mr Erikson was just leaving his home when he noticed an odd phenomenon in the North East. At first he thought it was an aeroplane but very soon realised it couldn't be. It was a bright object rolling in spirals. It was bluish in the centre. The weather was misty and the object appeared to burn a hole in it. It was one hundred meters above the horizon. The phenomenon lasted for a few short minutes.

The Finish photo series featured above clearly shows a strange rotating vortex cutting through the early morning mist. Could these vortexes be the "soft spot?" This important sighting captures the spiral vortex action of the UFO around a stationary disc of energy at the centre which I believe is the fundamental elevated mass at the centre or the soft spot.

Modena Utah, 06/04/05

It was early Sunset. We had been watching strange funnel clouds that appeared to have these aircraft coming down through the funnel "cloud." We think they are coming through from another dimension. This has been going on for several months. I was purely an amateur in this field. The photo features two objects either side of a round sphere and a "funnel cloud".

Once again we return to cloud tunnels and vortex energy around UFOs. The cover article in this issue is a translated Italian article from Roberto Pinnotti's UFO Notiziario, 'the incident at Nespolo,' which presents, photographically, a layered diffracted image of an energy field surrounding a UFO. This is a vortex field that has compressed the layers of water

droplets into distinctive pressure bands with a stationary central soft spot. Is this the energy spectrum of such a hypothetical vortex point through which a UFO traverses into our dimension?

We now address the possibility of finding new descriptive evidence of how UFOs were observed to enter and leave our atmosphere in an extensive new UFO literature search aimed at collating and analysing these descriptions. This article shows how existing sighting databases can be used to reveal new information for the purposes of comparative ufology by the use of new search criteria.

After writing my last article for FSR I have concentrated on looking for reference cases where UFOs have been observed sliding in and out of anomalous defects in the sky in much the same manner as was observed during my sighting. I began researching UFO databases for KEY WORDS, SENTENCES AND PHRASES to detect cases similar to mine and what I've found is most interesting.

Here are some examples of the key words selected to find possible portal cases: invisible curtain, doorway, slit opening, crack, tear, wormhole, black hole, de-materialise, dimensional opening, black vortex, black doorway portal, black void, ripped open, black tunnel, distortion, dark rift, gateway, bright hole, torn opening, sky parted, rip in space, folded back.

Of the approximate 18,000 cases perused in my sample of data, only 308 cases or 1.7 % had similarities to my case. Although these cases are not "exactly" like mine, they do describe how UFOs were seen to arrive and depart by passing through a mysterious dark defect in the sky. I refer to these defects as the Soft Spot, a hypothetical portal or aperture which allows the UFO to pass in and out of other dimensions. I propose that these dark anomalies are immense local changes in our earth's atmospheric mass that collapse space into a traversable conduit. I believe this because I experienced a dramatic slowing of time during my encounter while observing the slit opening of just such an atmospheric anomaly. I also experienced an altered state of consciousness. Of all 308 of the cases linked by descriptive terms in my search only one case besides mine, indicated an altered state of consciousness accompanied by a simultaneous time distortion.

"Moving in a direction from south to north were three objects that clearly were not conventional aircraft. Both my brothers are airline flight instructors and I have been around pilots all my life. I have a fairly good knowledge of aircraft and their characteristics. While observing them I seemed to be in an almost altered state of consciousness.

As though time slowed down to allow me to make their observance in remarkable detail. There is not even a slight amount of doubt in my mind that these were not of this world. I am still awed by this experience."

Of course the gross differences in accounts can be due to the position of the witness relative to the object and opening. In my case, I was parallel to the opening, and therefore I couldn't see the opening until the left edge of the object (craft) began to disappear into it, bit by bit until it was completely gone.

Another interesting fact is the biggest variable in a study of this kind is the grammar the witnesses use to describe the openings in the sky. Some of the witness's phrases correlate well with common words used to describe the dark anomaly. However, there is also a risk of missing those cases where the descriptions use language at variance from these general terms due to differences in language, social backgrounds and their general level of education. We need a broad sample of words in the sample to account for these more eccentric terms.

We also must remember the witnesses are trying to describe an "un-natural phenomenon" by using grammar taken from their own everyday experience of life. Some of the stronger cases involve two witnesses standing side by side observing the same event and again they will be using different terms and phrases to describe what they have seen. Here are some typical illustrative descriptions that give a strong hint of the characteristics of these portals:

"She said that she saw a hole appear in the sky with rainbow colours emitting from within it and then the spacecraft emerged out of the opening and hid behind a cloud"

"The UFO object disappeared into a rainbow spot in the sky"

"It happened so fast that we don't know if it took off vertically instantly or if it just faded out but I saw a vertical line in my eye, sort of like an impression on the retina. The line seemed to lean slightly to the right, so eastern direction, but it could have been perfectly vertical. It was not a line of smoke or steam or light but something difficult to define or explain, as if the sky opened up and took away the ball away then closed up again. It was really a weird feeling.

"The hole was total blackness or absence of everything, I watched it for several seconds and it simply collapsed in on itself and vanished"

"I saw a huge flash of light and then 4 UFOs enter our atmosphere it literally reminded me of a wormhole effect."

"a black hole with escaping craft, then there was a flash of light that came up from the earth into the hole and it started to close. I can't explain this, but there is life out there and they use these port holes to visit us"

"Black hole in the cloud like a tunnel in it, with a wisp of clouds from the centre of the mass defying the flow of clouds"

"There appears to be some kind of doorway allowing the craft to appear and disappear"

"When I say materialise I saw it come out of the sky as if travelling through a slit in the sky it didn't appear out of

nothing"

"A flash of light opened the sky and a circular cloud form
The circle appeared to curl up like it was going through envelope slot."

"A black hollow square more like portal rather than vehicle in the sky"

"The black perfect square hovers, disappears in porthole, wormhole or something"

"Perfectly straight line in the sky above cloud level that looked like a crack in the sky"

"The cloud narrows into a single line & object consume the cloud or came out of it"

"Spiralling cloud with a black hole inside and soundless lightening"

"Dark disk or hole in the sky motionless, and a small shiny object looked to exit and fly away"

"I saw a strange black cloud in the beautiful sunshine sky the cloud seemed to be moving like a vortex and I couldn't take my eyes off it, the next thing I remember is crossing the bridge on the "interstate", I lost 10 minutes and do not remember driving those 10 minutes"

My Conclusions: After reviewing these 18,000 cases and finding 308 positive matches (1.7%), I've concluded that some of today's researchers are missing an irrefutable clue to the UFO puzzle. I believe that they should focus their attention on these atmospheric anomalies by asking questions during their investigations that would associate the craft arriving and departing through a specific identifiable opening. Some might even want to re-evaluate all their cases in their data bases by searching for key words and phrases in a similar way to those I have used. I think there are many thousands of more cases to be found and even more outside the English speaking World; it might just raise the bar to the next level. I think this phenomenon holds the key to sharing new ideas, theories and experiments on how new physical properties of space are caused by UFO emanations that defy a conventional scientific explanation. I suspect that these wormholes manifest as a result of the UFO tuning the local atmospheric mass in a novel way that negates the need for super-dense material from collapsed stars used in conventional wormhole theories. Finally in my search I found a natural model to explain the fundamentals of wormhole behaviour.

FALACO SOLITON

Dear Mr. Donald Pilz

Our experiments indicate that the ring vortex phenomena appearing in your Doppler radar diagrams may be analogous to what is known as a Falaco Soliton, which is reproducible in an ordinary swimming pool with the aid of a common Frisbee. In the Falaco Soliton, two vortices are connected by a string like feature which the discoverer, Prof. R.M. Kiehn, refers to as a "torsion string singularity" or "wormhole" (see graphic). Our association is gradually gathering the machine tools and equipment needed to construct a small scale demonstration of the time dilation effect within turbo plasma. We have a privately funded grant enabling us to proceed with a modest research program, and expect to have a working model in about 16 months. Jim Ostrowski
